

Daniel Shashank Deshmukh

+91 8552084251 · deshmukhdaniel2005@gmail.com · Mumbai, India · github.com/DanielDeshmukh · [LinkedIn](#) · [Portfolio](#)

CAREER OBJECTIVE

Computer Science undergraduate (graduating May 2026) with hands-on, production-grade experience in full-stack development and applied AI systems. Delivered end-to-end client projects using React, FastAPI, Supabase, and LangGraph-based agentic pipelines. Passionate about building automation-driven software that solves real problems, and seeking a structured product or AI-focused team environment to contribute at scale.

WORK EXPERIENCE

Babuji Chaay Café

Freelance Full-Stack Developer

Jul 2024 – Mar 2026

Mira Road (E), Mumbai

- Designed and deployed a production-grade Point-of-Sale and Sales Management System for a live café business; owned the complete delivery lifecycle from requirements gathering through to deployment at babujichaay.com.
- Built the full-stack solution using ReactJS, Supabase, and Express.js — covering billing, order tracking, inventory control, and role-based authentication.
- Delivered two signature client features: a custom offer creation engine and a Lucky Customer system where the Nth daily customer (owner-configured) automatically receives a 100% discount — fully automated with zero manual intervention.
- System serves real customers daily with no reported downtime since launch.

Sahakari Bhandar (Reliance Retail)

Customer Service Associate

May 2024 – Dec 2024

Mumbai, India

- Managed high-volume billing and transaction processing with accuracy across peak retail hours, resolving customer discrepancies in real time.
- Maintained consistent professionalism across 100+ daily customer interactions during peak-hour surges, building strong communication and composure under pressure.

PROJECTS

AETHER — Automated Ethical Testing & Heuristic Evaluation Routine | *React.js · FastAPI · LangGraph · Python* — [In Development](#)

<https://github.com/DanielDeshmukh/aether>

- Architected an AI-driven agentic security platform that moves beyond static scanning toward intelligent, adaptive penetration testing; built a modular SaaS architecture using React.js for the frontend and FastAPI with Playwright for the execution layer.
- Implemented an Agentic Reasoning Loop using LangGraph and Python to simulate expert security decision-making; integrated Gemini 1.5 Pro and Claude 3.5 for payload generation, backed by a multi-tenant Supabase database and a built-in Kill Switch for target safety.

Ella — Retrieval & Reasoning Engine for Qure | *LangGraph · Python · Medical RAG* — [Deployed \(CLI\)](#)

<https://github.com/DanielDeshmukh/ella>

- Built and deployed a CLI-based agentic AI engine with hybrid Medical RAG (semantic + keyword retrieval), intent classification, and state-driven triage logic — routing patient interactions across booking, query, and emergency pathways at ~1.8 s average end-to-end response time.
- Engineered LLM-based and regex safety guardrails for real-time detection of life-threatening symptoms, triggering an emergency bypass that routes critical cases outside the standard queue.

Hector — Legal Intelligence RAG System (Hard-RAG) | *Python · CoVe · Hybrid RAG* — [In Development](#)

<https://github.com/DanielDeshmukh/Hector>

- Designing a high-precision agentic AI system for navigating complex Indian legal texts (IPC to BNS transitions), built on a Chain-of-Verification (CoVe) architecture combining hybrid retrieval, hierarchical contextualization, and strict citation validation.
- Engineered a Validator Agent enforcing zero-hallucination guarantees — responses generated only when grounded in verified sources from curated Bare Acts and legal commentaries, with page- and paragraph-level traceability.

Luxury Interior Design Portfolio | *React 19 · Vite · TailwindCSS* — [Client Demo](#) — [Deployed](#)

<https://danieldeshmukh-webdesigns.netlify.app/>

- Built a production-ready client-facing portfolio featuring luxury branding, dynamic project filtering, and Swiper-powered media handling; deployed with SEO optimisation and full mobile responsiveness.
- Integrated WhatsApp API and automated email inquiry workflows to streamline lead generation and client communication.

EDUCATION

Shree L.R. Tiwari Degree College — Mumbai University <i>Bachelor of Computer Science · CGPA: 7.5 (7.0+ maintained across 5 of 6 semesters)</i>	<i>Expected May 2026</i>
Divine Providence College of Commerce & Science, Nallasopara (E) <i>Higher Secondary Certificate (HSC)</i>	2023
Little Flower English High School, Nallasopara (W) <i>Secondary School Certificate (SSC)</i>	2021

CERTIFICATIONS

- Harvard CS50 — Introduction to AI with Python | 12 Projects (2026)
- freeCodeCamp — JavaScript Algorithms & Data Structures | Front-End Development Libraries (2026)
- Anthropic — Claude with the Anthropic API (2026)

TECHNICAL SKILLS

Languages & Core: Python, TypeScript, JavaScript (ES6+), HTML5, CSS3
Frameworks & Libraries: React.js, Node.js, Express.js, TailwindCSS, FastAPI
AI & ML: LangGraph, RAG (Semantic + Keyword), Agentic Reasoning, Chain-of-Verification (CoVe), LLM API Integration (Gemini, Claude)
Backend & Infrastructure: Supabase, WebSockets, REST APIs, Multi-tenant Architecture
Tools: Git & GitHub, Postman, Figma, VS Code, WebStorm
Soft Skills: End-to-end Client Delivery, Technical Communication, Adaptability, Leadership, Performance Under Pressure
